# Quad Chart for: *Shared Computing Infrastructure for Large-scale Science Problems*

Challenge Project Seeks to Address:

- simulation of interactions between light and matter at high energies
- understanding star formation by relating models to observational data
- probing the inner structure of the earth using seismic waves
- meaningful information in real time extracted from dynamic market data

Solution(s) or Deliverables:

- 28-node cluster with data storage
  - 1120 Intel cores / 2240 HT …
  - 2.4 GB of RAM / HT
  - 1.2 PB of shared disk
  - 100 Gb/s local network
  - 10 Gb/s wide area network
  - >100 Gb/s link to Internet2
- local + global integration
  - Open Science Grid site
  - uses UConn HPC "condo model"
  - access by all UConn + OSG users
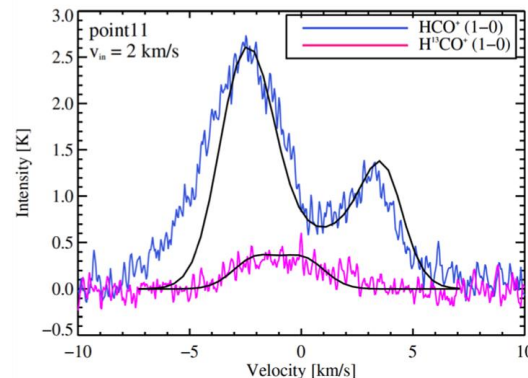

Scientific Impact or Broader Impact:

- benefits all members of large international collaborations
  - GlueX (130 scientists)
  - CLAS12 (250 scientists)
  - Origins space telescope, …
- sharing with UConn, OSG researchers
  - goal of 25% shared
- new undergrad course component
- BiteScis: K-12 teacher enrichment
